

Installation Instructions

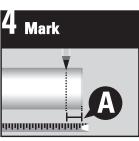

CUT - cut pipe square

SAND - sand outside corner of pipe around entire diameter using Sanding Sponge for a minimum of 20 seconds

WIPE - wipe pipe with a clean rag to remove all debris

MARK - mark pipe with minimum insertion line per table below

PIPE SIZE	A
1-1/2"	3/4"
2"	1″
3"	1-1/4"

Proper Alignment Misaligned Pipe & Fitting Hub Misaligned Pipe & Fitting Hub

INITIAL INSERT - gently insert pipe into fitting hub until you feel resistance from the rubber Gasket; STOP and check to ensure pipe is properly aligned with fitting hub.

FULLY INSERT - apply steady force and twist pipe and/ or fitting until 1) minimum insertion mark is no longer visible AND 2) you cannot insert pipe any further ALIGN - Twist fitting to desired alignment; check to ensure pipe is fully inserted

To Disconnect - twist and pull pipe and/or fitting until pipe is removed from ConnecTite fitting. Check to ensure rubber Gasket and metal Lock Ring are not damaged or out-of-place.

Helpful Hints

MOST CRITICAL FACTORS FOR PROPER INSTALLATION:

- Beveling the end of the pipe
- Ensuring that the pipe is not going into the fitting hub at an angle

IF HAVING TROUBLE INSERTING THE PIPE:

- Check alignment
- Simultaneously push and twist
- Apply liquid dish soap, liquid hand soap or silicone based lubricant to Gasket and/or end of pipe

IF YOU ARE REUSING THE PIPE:

- The fitting should only be reused up to 3 times
- When reusing the fitting, be sure that you are using a fresh pipe end; scoring from Lock Ring can be a pathway for a leak
